Clean Water for HAITI

East District UMC

Mission Focus

FROM THIS

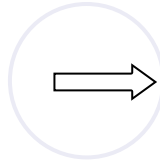

When you want a drink of water do you even think of where it comes

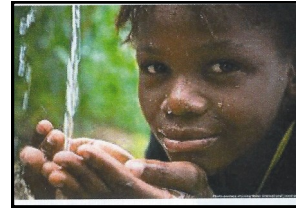

from? We go to our water fountain and get a drink or go to the refrigerator and get a bottle of water. In remote areas of Haiti there is no such thing. The water they have to use is filthy and unsafe.

We can help!!

For **\$60** we can send a filtration system to Haiti, so a family can have clean, safe drinking water.

TO THIS!!!

This is what the water looks like when it comes through the filter and out of the bucket. The Sawyer Filter will provide clean, safe drinking water for at least 10 years for individuals & families.

THROUGH THIS

For making donations

please make your check payable to East District UMC & mark in your check memo line "Haiti Water". Please pray about this and give as much as you possibly can.

(Flyer wording adapted from Rev. Keith Broyles' s Diboll UMC Sept. 2013 Newsletter)

The Sawyer Point One Filter with Bucket Removes:

Bacteria, Which Cause:

I.E.: Cholera, Botulism (Clostridium botulinum), Typhoid (Salmonella typhi), Amoebic Dysentery, E. Coli, Coliform Bacteria, Streptococcus, Salmonella

Protozoan (Cyst):

I.E.: Giardia, Cryptosporidium, Cyclospora

Using technology taken from kidney dialysis, Sawyer® water filters use Hollow Fiber Membranes. Our filters are comprised of tiny "U" shaped micro tubes that allow water to enter into their core through tiny micro pores. At 7 log (99.99999%) the filter attains the highest level of filtration available today and yet it has a very high flow rate due to the large amount of tubes. Each filter is certified for ABSOLUTE microns. Simply put, it is impossible for bacteria to pass through the 0.1 micron filter.

Assembly Kit Includes:

- 1 - Hole Cutter
 - 1 - Water Filter, adapter & 1 Foot Hose
 - 1 - Backwash Syringe
 - 1 - Filter Hanger
 - 1 - Filter Cap
- Detailed Instruction Sheet
